Mandatory Secure Software Development Training

Dear Associates,

Developing and delivering secure application software is a business requirement in today's market and a cornerstone of our promise to Clients. It is therefore key for you to be aware of Secure Software Development Lifecycle (S-SDLC) fundamentals and to help integrate security at every phase of the SDLC by secure design and secure coding practices. To accomplish this goal, Corporate Security is expanding its self-paced eLearning **Secure Software Development Training** program for all developers across the entire company, including Software Platform Engineering – Application Development & Management (SPE – ADM).

Starting this year and going forward, completing this training will be a priority for tenured associates annually and within 120 days of induction for new joiners. Our goal is to achieve 100% compliance by the end of January 2024, and our progress will be reported to the Board monthly.

I encourage you to make the most of this training program. Thank you for your attention to this critical requirement.

Regards,
Hari Parameswaran
Global Delivery Head - ADM

Key Dates:

- Course assignment in CLearn: Tentatively by 18-Oct
- Orientation session by L&D: On or before 18-Oct
- Due date for completion: 31 Jan 2024

SPE-ADM specific training curriculum attached

Training Objectives:

- Empower developers to deliver secure code
- Promote a culture of secure software development throughout the organization
- Provide continuous education on the Secure Software Development Lifecycle

Expected Outcome:

- Improved awareness on secure software development and its importance
- Deliver secure software to clients
- Reduced security risks and associated costs
